EHDA Environmental History Database Austria

The **EHDA** covers relevant works on Environmental History, academic qualification work ("gray literature") and reports of current and completed research projects. At the moment EHDA contains about 1200 data sets. These data can be searched online in a custom-made database with regard to their period, location and theme. Focal points and blind spots on the 'map' of environmental history research in Austria can thus be identified. This makes accomplishments and potentials of Environmental History in Austria visible.

Search for: [Help](#)

What is Environmental History in the context of EHDA?

To us, Environmental History focuses on the reconstruction of the state of the environment in the past, on the physical interaction of society and nature, its historical development and on the reconstruction of the perception and interpretation of this interaction by contemporaries.

Environmental History is treated as an interdisciplinary field. Therefore the search was not confined to self-defined Environmental History. We included papers which define themselves as agricultural history, history of technology, history of science, historical geography, ecology, social and economic history, historical ecology, archaeology or other fields. Due to their interest in the subject, despite differences in their approach, to us they form part of the literature on Environmental History in Austria.

What was included in the database? How did we search for and select data?

Geographical coverage is based on Austria in its current borders, with few exceptions. Works by Austrian researchers about other regions and those which do not have a regional focus such as theoretical work, reviews of the literature and comparative studies, are also included. Solely works published after 1945 have been included.

From January to March 2005 experts from a variety of disciplines were asked to share their knowledge of works relevant to Environmental History in Austria from their fields of expertise. Using the criteria mentioned above a selection from these recommendations was made by the project team. 41 thematic clusters were identified and subsequently searched for in the online catalogue of the Austrian library system. Selected scholarly journals were systematically reviewed for the period 1945-2005, and these findings are also included in EHDA. This is only a first stage of gathering data and should be seen as work in progress.

Related work: The project team has written an overview on Environmental History in Austria which can be downloaded here.

The screenshot shows a web browser window displaying the EHA Environmental History Database Austria. The browser's address bar shows the URL <http://www.ecology.at/ufo/timeline.php>. The page header includes navigation links: Deutsch, Home, Events, Courses, Team, Projects, Links, Contact. The main title is "EHA Environmental History Database Austria". Below the title, it states "EHA allows you to search for works covering specific periods." A bar chart shows the number of hits over time, with a peak around 1900. A dropdown menu is open, listing search terms such as agriculture, air, animals, aquatic ecosystems, cities and towns, climate and weather, conservation environmental protection, consumption, disasters, diseases and epidemics, ecosystems (terrestrial), energy, engineering, technology, environmental laws and regulation, environmental politics, environmental pressures, impacts and stress, environmentalism, forests and woodlands, and gender. A search box is set to "Österreich". A list of search options is provided on the right, including "search by time".

show

Time Periods. In those cases where it was possible to assign a period for a work, our own set of periods has been applied for classification. This set of periods works with time dependent unit size. For periods before the common era unit size is the millenium, from 0 C.E. to 1000 C.E. centuries are used, between 1000 C.E. and 1900 C.E. unit size is fifty years, and from 1900 C.E. to the present decades are used. For the time before 12000 B.C.E. - this is the Upper Paleolithic and older prehistoric periods in Austria - no further delimitation has been made. The same ist true for the period after 2000 C.E.
